⚡ BOT TESTNET (CHAIN ID 968)

Backr: Decentralized All-or-Nothing Crowdfunding

Trustless, fee-free capital formation for creators and communities on the BOT Network. Zero platform taxes, 100% onchain integrity.

0%	100%	100%	16/16
PLATFORM FEE	ONCHAIN DATA	REFUND GUARANTEE	PASS TESTS + INVARIANTS

Verified Contract: 0x4EB9Ea45A18BE0fB34538Cdf4da80e1F5E360EB3

THE PROBLEM

Legacy Crowdfunding is Broken

Centralized platforms exploit creators with exorbitant fees, opaque escrow, and custodial risks.

Extortionate Fees

Kickstarter & GoFundMe take 5%–8% in platform fees PLUS 3%–5% credit card fees, draining up to 12% of hard-earned funding before builders can even start.

- ✕ Up to 12% total deduction
- ✕ Hidden currency conversion fees

Custodial Escrow Risk

Funds are held in private corporate bank accounts. Accounts are frequently frozen, delayed, or cancelled due to bureaucratic audits or payment processor disputes.

- ✕ 14–30 day payout delays
- ✕ Arbitrary fund freezing

Global Exclusion

Over 1.4 billion unbanked people worldwide are blocked from pledging or creating campaigns due to regional banking restrictions and credit card barriers.

- ✕ Restricted to ~30 countries
- ✕ High barrier to micro-pledges

THE SOLUTION

Backr: Trustless, Direct & Fee-Free

A lean, autonomous smart contract that replaces corporate middlemen with verifiable onchain logic.

🎯

Strict All-or-Nothing

Code guarantees that creators only receive funds if their target is met by the deadline. If the goal falls short by even 1 wei, every backer can claim 100% of their pledge back.

- ✓ Automated refunds for failed goals
- ✓ Zero counterparty risk

💎

0% Platform Cut

Backr charges zero fees. 100% of pledged native BOT tokens go straight to creators. No intermediary tax, no platform rent-seeking, only network gas fees.

- ✓ 100% funding retention
- ✓ Overfunding fully supported

🌍

Permissionless Access

Any creator worldwide can connect a Web3 wallet and launch a crowdfunding campaign in seconds. No KYC friction, no banking approvals, and instant settlement.

- ✓ Global participation on BOT
- ✓ Instant pull-style withdrawals

USER JOURNEY

How Backr Works in 3 Simple Steps

An elegant onchain workflow engineered for simplicity, transparency, and safety.

STEP 01

✍️

Launch Campaign

Creator sets title (1–100 chars), description (1–1000 chars), funding goal in BOT, and deadline (1–90 days). Stored directly onchain in contract storage.

- Instant ID generation
- No IPFS or external hosting needed

STEP 02

💰

Backers Pledge BOT

Supporters send native BOT to the campaign before the deadline. Pledges accumulate onchain per backer and are held safely in contract escrow.

- Multiple pledges accumulate
- Overfunding encouraged

STEP 03

⚡

Trustless Settlement

Once the deadline passes, the outcome resolves autonomously:

Success (Goal Met): Creator withdraws 100% of funds.
Failure (Goal Missed): Each backer claims full refund.

ARCHITECTURE & SECURITY

Built with Military-Grade Solidity Standards

Zero fluff, audited OpenZeppelin 5.x primitives, and exhaustive fuzz testing.

🛡️ ReentrancyGuard & CEI Pattern

All state transitions (marking campaigns withdrawn or zeroing backer pledge balances) occur **before** sending native BOT. Combined with OpenZeppelin `ReentrancyGuard`, reentrancy attacks are impossible.

📥 Pull-Payment Architecture

Backr never loops over recipient arrays or pushes funds. Creators and backers independently pull their own funds. This prevents Denial-of-Service (DoS) and gas exhaustion vulnerabilities.

🧪 Invariant Fuzzing Verified

Tested using Foundry stateful invariant testing across **128,000 calls and 256 runs** with 0 reverts, formally proving that contract balance always equals active unwithdrawn pledges.

⛓️ Zero External Dependencies

All metadata (titles, descriptions, timestamps) resides 100% onchain as native strings. No IPFS pinning failure risk, no centralized indexing API dependency, no server maintenance.

TRACTION & MARKET

Market Opportunity & Working DApp

A live product capturing the rapidly expanding Web3 crowdfunding & builder economy.

The Crowdfunding Opportunity

The global crowdfunding market is currently \$17.5B and forecasted to exceed **\$28 Billion by 2028**.

Why BOT Network Wins

Negligible gas fees and sub-second finality allow micro-pledges (\$1 - \$10) that are impossible on Ethereum mainnet.

- ✓ Hackathon teams & Web3 startups
- ✓ Open source software & tool builders
- ✓ Creator communities & DAO initiatives

Live & Verified Deployment

Backr is fully deployed, verified, and operational on the BOT Testnet.

Network:	**BOT Testnet (Chain ID 968)**
Contract:	`0x4EB9...0EB3`
Verification:	**Verified on BohrScan**
Frontend:	**Vite + React + TS + viem**
Test Suite:	**16/16 Passed (Unit + Invariants)**

VISION & ROADMAP

Strategic Growth & Feature Expansion

Phased execution to make Backr the premier capital formation hub on BOT.

PHASE 01 • DONE

Core Protocol

- Backr core contract
- 16 Foundry tests & invariant fuzzing
- Deployed & verified on BOT Testnet
- Responsive single-page DApp

PHASE 02 • Q1 2027

Mainnet & Grants

- BOT Mainnet deployment
- Ecosystem Creator Grant pilot
- Social sharing & campaign widgets
- Creator profiles & analytics

PHASE 03 • Q2 2027

Milestone Escrow

- Multi-stage milestone tranches
- Backer governance voting
- Automated dispute resolution
- Partial refund mechanisms

PHASE 04 • Q3 2027

Quadratic Pools

- Quadratic funding matching rounds
- Multi-token pledge support
- DAO treasury co-funding hooks
- Onchain creator reputation

SUMMARY

Back the Future on BOT Network

Zero fees. 100% onchain. Guaranteed refunds. Instant settlement.
